Description

RH-AUDIO High-Power Audio Amplifiers are devices that amplify electrical signals that have been adjusted to an appropriate volume and tone sent from the mixer or pre-amplifier, give high power outputs 1000/1500/2000 watts, specially designed for big installations where large number of speakers are required in a variety of commercial and industrial installations.

These three high power models are 3U booster amplifiers featuring 70V,100V and 4-160hm speaker outputs, with universal balanced XLR and 1/4" plug socket for picking up signal from audio mixer and preamp, while a group of outputs for extra power amplifiers, all of them benefit from working on 70 volt and 100 volt line systems.

Complete protection includes short circuit and thermal protection, current limiter and overloading with individual level led indicators on front panel.
